Language Resource Manager

Job Summary:

We are looking for Linguistics experts with team management experience, extensive experience working on NLP projects and proficiency in 2 or more languages from any one of the following language groups:

- Bengali, Oriya, Assamese, Bodo, Manipuri
- Kannada, Malayalam, Tamil, Telugu
- Hindi, Maithili, Urdu, Dogri, Kashmiri, Punjabi, Gujarati

The Language Resource Manager will have two-fold responsibility:

- Support development and improvement of our LLM, ASR, and TTS models by providing linguistic expertise
- Manage the work of freelancing language resources for the assigned group of languages.

Key Responsibilities:

- Linguistic support
  - Collaborate with machine learning engineers to understand data requirements and to identify opportunities to integrate linguistic knowledge into model development.
  - Create guidelines for data annotation/validation projects based on data requirements.
  - Evaluate the linguistic quality of model outputs and provide feedback for improvement.
- Management
  - Collaborate with data sourcing team to understand data processing timelines and operational constraints.
  - Set up operational pipelines for processing sourced data and delivering processed data to model development team.
  - Source freelancing resources for various tasks for languages from the assigned language group, assign them data annotation task and track and manage their work.

Minimum Qualifications and Experience:

- Master's or PhD in Linguistics or Computational Linguistics with at least 3 years of experience working on NLP projects, providing language data annotation for Machine Learning or GenAI projects.

Required Expertise:

- Experience creating guidelines to be followed by language resources preferred.
- Project co-ordination experience with 2+ years of team/project management experience preferred.
- Experience working with low resource languages is a plus.

Technical Skills:

- Linguistic Analysis: Strong understanding of linguistic principles and the ability to analyze linguistic data.
- Problem-Solving: Ability to identify and solve linguistic challenges related to language technology.
- Collaboration: Excellent communication and collaboration skills to work effectively with machine learning engineers and other team members.
- Management: Ability to set up processes and pipelines, track and manage work of language resources.
